The AP has printed a brief article on how the NRC has given permission to Tesla to begin operating the battery storage units it has brought online in California. Prior to this ruling, the Federal Energy Regulatory Commission (FERC) had decided that the company had to obtain a Section 201 finding first, and so they were planning to meet with the NRC to get permission. It looks like that no longer necessary. At the NRC meeting, Tesla announced that they have invested \$70 million in battery projects in California. Tesla has been operating on a Section 201 authorisation, so this is not new. This does not mean that they will be able to begin building any new projects right away. Obviously, it is not the start of a massive construction boom, and FERC is considering a Section 202 investigation, which would delay Tesla's ability to build for a bit longer. Still, this is another major step for Tesla in its strategy to begin charging customers and sell electric cars. The new energy mix coming on line should boost the industry and thus give us a good idea of what the EV industry will look like. Many people believe that the technology will not scale, but we have seen a variety of electric vehicles and battery technologies making big strides. Tesla has been a good model for other manufacturers, which have begun bringing their products to market. Q: How can I detect if the user uses a browser extension in my web page? I'm building a web page that uses a certain browser extension and I want to know whether the user has the extension or not. The only thing I can think of to do this is to run a check of the user agent string and see if it contains an extension word or not. Is there a better way to achieve this? A: You can use a simple check like this: `if(('extName' in navigator.userAgent)){ // Extension exists! } else{ // Not an extension }` If you don't want to send a binary, you'll have to send the user agent as string and check it with regular expressions. If you also need to send some data about the extension (for example the version) then you should go with that. Of course,
